## ❖ Introduction ((overview))

( Cardiovascular department )

It is a part of the clinic or hospital that specializes in treating the heart and blood vessels and department of cardiovascular medicine is one of the largest and most comprehensive heart practices in the world.

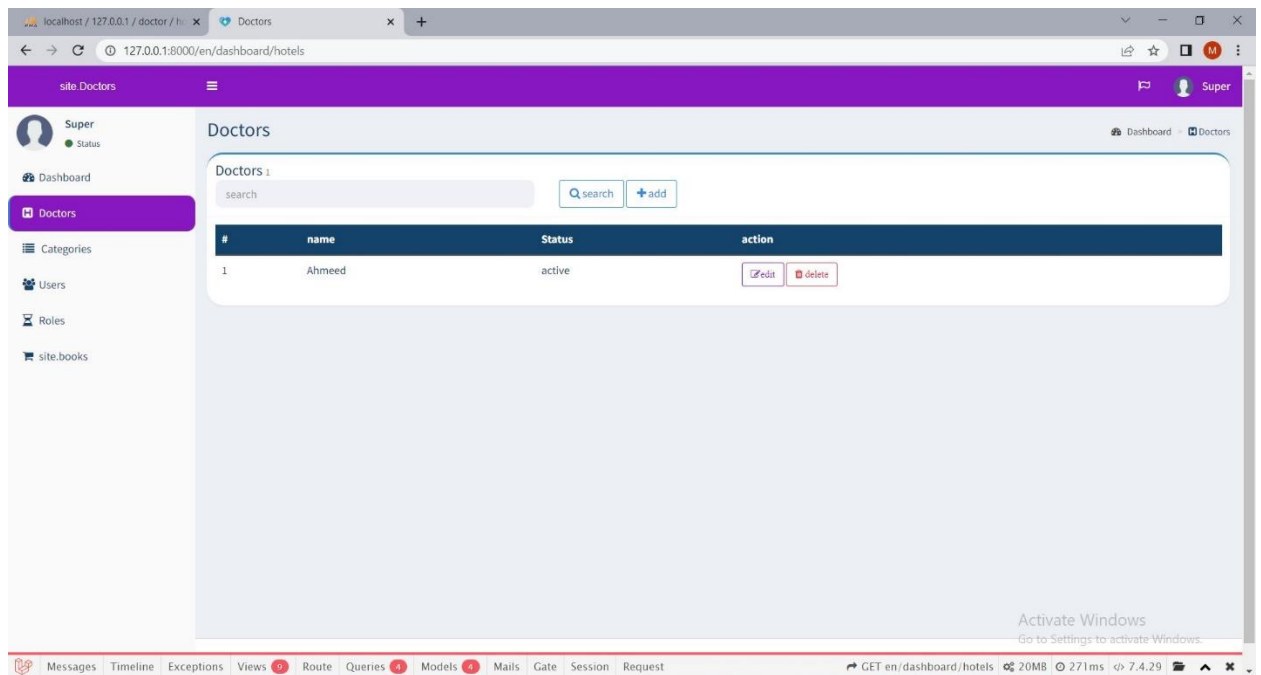

We made the website to help the patient to book an appointment before go to the doctor or check about the doctor has available or not and the user can login in the website by username or email and password if it the first time of him and if it not the first time he enter the email and password. we try to help patients by this is website .

## ❖ Functions :

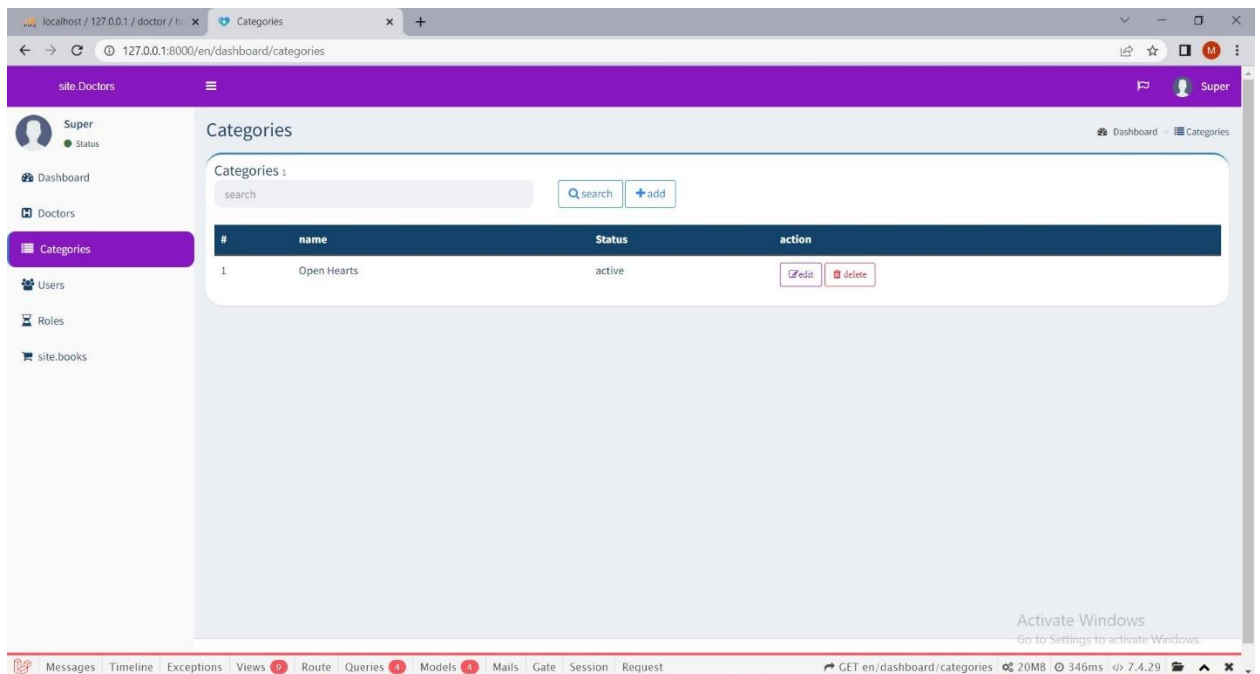

1. Register (( if it the first time of the user to enter the website.. he enter the name , email and password )).
2. Login (( if it not the first time and he has account so he enter email and password )).

3. Super admin who control in the website by add or delete or edit (( doctors , users , appointment , and put rules )).
4. Admin who can add booking only
5. Categories which add by super admin and has the category of the clinic like operation and like this is .
6. Doctors who add by super admin and can delete or edit it and it include doctors in the website .
7. Users who add by super admin and can delete or edit it and it include users in the website .
8. Booking who add by super admin and can delete or edit it and it include all appointment of the patient .

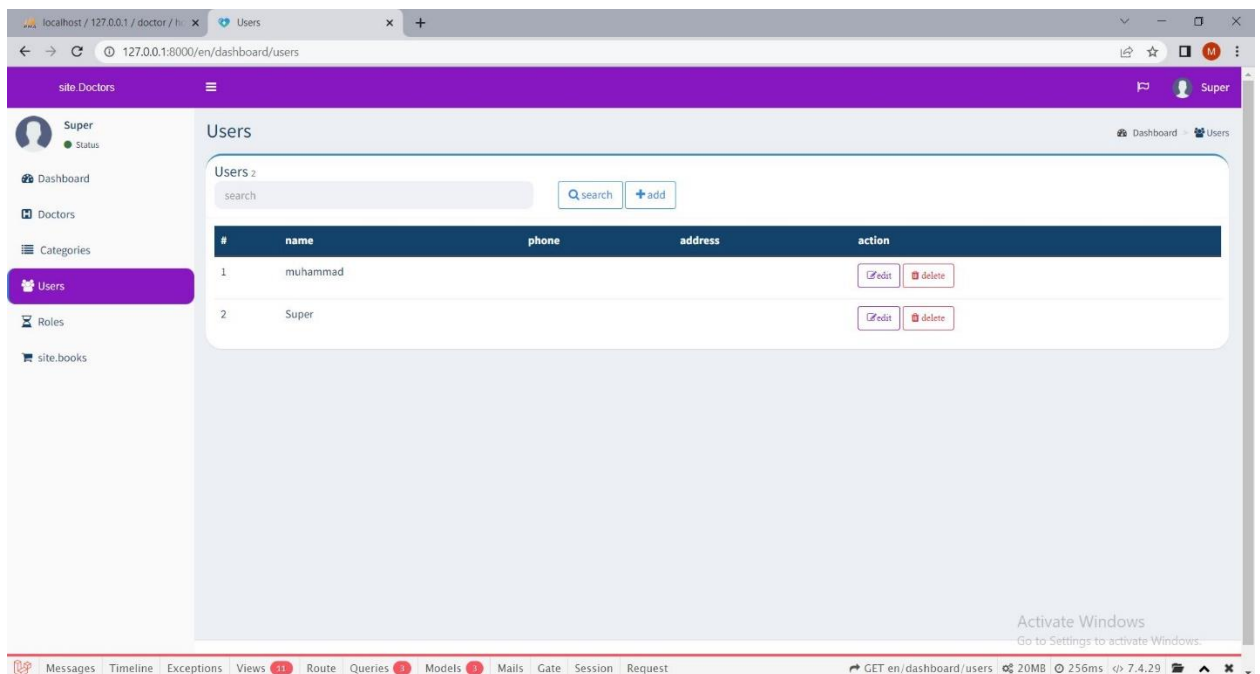

## ❖ Report :

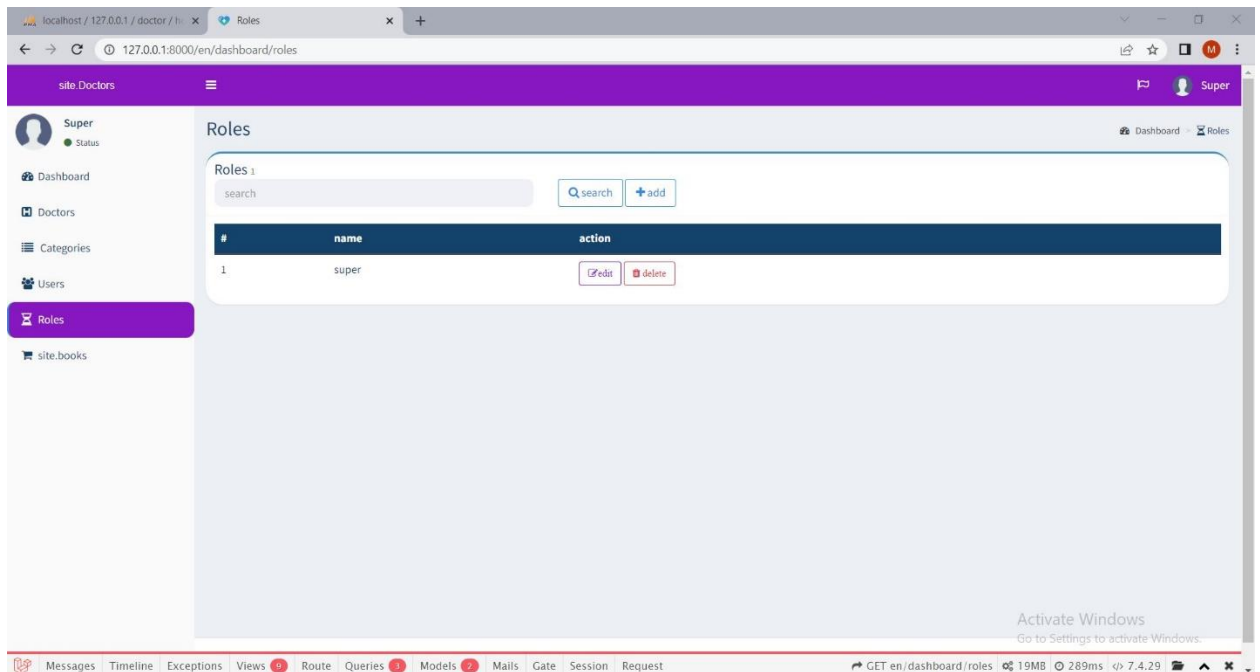

(( doctors who added by super admin and super admin can add or delete and edit doctor ))
